

MAHEEDHAR REDDY CHITIKI

Data scientist |machine learning engineer|generative AI

+33 7 80 80 68 84 @ chitikimaheedharreddy@gmail.com
Paris, France 92400

SUMMARY

Data Scientist and ML Engineer with 4 years building production ML systems — RAG pipelines, NLP classifiers, and recommendation engines. Background in HR operations gives me a practical edge in stakeholder communication and business-driven problem framing. Based in Paris, open to roles in France, Europe, and India.

EXPERIENCE

RAG-BASED ENTERPRISE KNOWLEDGE ASSISTANT 01/2025

Katalix Solutions Private Limited Bengaluru, India

Enterprise Knowledge Platform

- Deployed a production RAG pipeline solving retrieval slowness and hallucination issues in a retail client's internal document search system
- Implemented hybrid retrieval using FAISS and Pinecone vector databases to improve search accuracy across policy and operational documents
- Integrated OpenAI LLM with a retrieval pipeline, resulting in measurable reduction in hallucination complaints from the client post-deployment
- Applied document chunking and embedding strategies optimised for small-scale internal document sets
- Collaborated with a cross-functional development team to deliver and maintain a live production system
- Technologies: Python, LangChain, FAISS, Pinecone, OpenAI API, Transformers

NLP-BASED CUSTOMER SUPPORT TICKET CLASSIFICATION 03/2024 - 12/2024

Katalix Solutions Private Limited Bangalore, India

Customer Support Platform

- Deployed a live NLP classification system for an interior design client, automatically routing customer support tickets across 10–15 categories including issue severity (minor, major) and quality types
- Reduced manual triage time by 60% through automated ticket routing, directly measured post-deployment
- Built BERT-based text classification models using Hugging Face Transformers and PyTorch to handle unstructured customer complaint data
- Processed and cleaned real-world ticket data using NLP preprocessing techniques including tokenisation, normalisation and noise removal
- Collaborated with a development team to integrate the model into the client's live support backend
- Technologies: Python, PyTorch, Hugging Face Transformers, Pandas, BERT

AI RECOMMENDATION SYSTEM FOR E-COMMERCE PLATFORM 05/2023 - 02/2024

Katalix Solutions Private Limited Bangalore, India

E-commerce platform

- Deployed a live product recommendation system for an e-commerce client with a mixed catalogue of hundreds of products across multiple segments
- Solved the cold start problem by serving trending products by segment to new users, switching to collaborative filtering via matrix factorization for returning users
- Evaluated recommendation quality using A/B testing alongside Precision@K and Recall@K metrics
- Developed and exposed real-time recommendation APIs for seamless frontend integration
- Collaborated with a development team across the full pipeline from data processing to production deployment
- Technologies: Python, Scikit-learn, FastAPI, Pandas

SKILLS

Programming

Python · SQL · Pandas · NumPy

Machine Learning

scikit-learn · XGBoost · Random Forest

Deep Learning

PyTorch · TensorFlow

NLP and Generative AI Tools

LangChain · Transformers · RAG

Development and Deployment

FastAPI · Docker · MLOPS · Git · GitHub Actions

Cloud

AWS

Data Visualization

Matplotlib · Seaborn · Power BI · Tableau

EXPERIENCE

CUSTOMER CHURN PREDICTION MODEL

01/2022 - 04/2023

[Katalix Solutions Private Limited](#)

Bangalore, India

Digital Connectivity

- Deployed a live churn prediction system for multiple Indian internet and DTH providers to identify customers at risk of cancelling their subscriptions
- Enabled retention teams to proactively act on model predictions, directly supporting customer retention calling workflows
- Built and compared multiple models including XGBoost, Random Forest and Logistic Regression to identify the best performing approach
- Performed end-to-end data preprocessing, feature engineering and feature selection on real customer behavioural data
- Handled class imbalance using resampling techniques to improve prediction reliability on skewed subscription data
- Evaluated models using ROC-AUC, precision, recall and F1-score metrics
- Collaborated with a development team to integrate predictions into client retention workflows
- Technologies: Python, Pandas, Scikit-learn, XGBoost

SELF-DIRECTED LEARNING

01/2020 - 01/2022

[Data Science Upskilling & Career Transition](#)

Bangalore, India

Career Transition from HR to Data Science

- Transitioned from HR to data science with focused training in machine learning and AI
- Developed hands-on expertise in Python, data analysis, and statistical modeling

HUMAN RESOURCES EXECUTIVE

01/2015 - 01/2020

[Multiple Organizations](#)

Bangalore, India

HR Operations

- Managed the full recruitment lifecycle
- Maintained HR data systems
- Improved hiring efficiency

EDUCATION

Bachelor Of Technology: Computer Science & Engineering

01/2010 - 01/2014

[GVIC \(JNTUA\)](#)

India
